

Hello

I am not part of an organisation - just a private citizen. I would like to put forward a reminder to the ACCC for this project that people like me with hearing impairment rely on button batteries every day to run our hearing aids. I ask you to keep this in mind with any changes you make to ensure access to button batteries remains as it is, is not made more difficult or expensive, and that elderly people with difficulties breaking into packets with their hands are not disadvantaged.
